

FREE Resources

for

Homeowners and Homeowner Associations

Offered by the

Town of Gilbert Water Conservation Office

Our professional staff is available to:

Attend Gilbert HOA and Neighborhood Meetings

Our staff members can provide guidelines on ways to save money on water costs and streamline your landscape maintenance budget, plus a whole lot more!

Conduct Water Audits

Leaks can result in extra water costs not to mention thousands of gallons of water wasted. Our technician will make sure your irrigation system is operating as efficiently as possible and recommend best management practices to keep your system in top condition.

Propose Cost Savings

Landscape maintenance is typically the largest budget item for HOA's. Let us help identify ways to cut costs while insuring that your landscaped areas look their best year-round. A Landscape Water Evaluation will identify if water is being over or under applied based on the selection of plants and/or turf in your common areas. Sample landscape contracts are also available.

Answer Pruning Questions

Did you know that plants that are pruned too frequently require **more** water? Most shrubs only require semi-annual maintenance if not overwatered. We can provide a recommended pruning schedule based on the types of plants in your landscape. This can not only save water costs, but maintenance fees as well. Our certified arborist is available to assist you.

Offer Turf Care Advice

Turf consumes far more water than any other landscaped area. How much water do lawns really need? Are there brown or yellow areas in your turf? Do you have spots with standing water? How short and how often should turf areas be mowed? Our staff can help you determine if questions like these are issues with water application.

Help With Plant Choices

Whether you are facing plant replacement or new installation, we can provide resources to make your decisions easy. Full color brochures featuring over 200 plants can help you create a colorful, attractive, low-maintenance landscape.

Provide FREE Landscaping Workshops

Residents will benefit from a variety of session topics including pruning, irrigation, plant care, pest problems, yard watering, plant identification, landscape design, etc. A complete schedule is available by calling the water conservation office or visiting our website.
